Re: Pumping out elevator shaft to the storm sewer.

On May 1, 2002 (10:30 A.M.) I received a call from Tammy Ikerd stating that she had several people call in about someone pumping out a basement in the 300 block S. Campbell. I went to that location and found out that at 308 S. Campbell they were remodeling the building and that they had pumped out an old elevator shaft. Apparently, this was storm water that had been there for a long period of time. I talked to Mr. Robert Cook and he said that the elevator shaft had approximately 2' of water in it and it smelled bad. He said that this was a one-time thing and that they were going to fill the shaft with water and then concrete over the pit. I told him that the if they ever need to pump something like that again to contact our office or the storm water office. I called Greg Roeder and told left him a voice mail in case about this problem in case they receive any calls.
